

Hammock chair basic

Sonrisa lime SNC14-4

LA SIESTA hammock chair BasicSonrisa can be left outside all summer! Sonrisa is made of HamacTex® (polypropylene). This fibre is weatherproof, fast-drying and surprisingly similar to cotton in look and touch. The spreader bar is made of high-quality hardwood from well-managed forests (FSC®). This hammock chair features a tearproof

selvage created by doubling the weft threads, thus making sure that you will be able to enjoy your peaceful LA SIESTA oasis for many years to come! A trademark characteristic of a LA SIESTA hammock chair is its integrated safety swivel, allowing for secure rotation of your hammock chair, thus making it more durable.

Hammock chair basic **Sonrisa lime** SNC14-4

Weatherproof material

HamacTex® is a polypropylene fibre developed for the special requirements of a hammock fabric. It is surprisingly similar to cotton in look and touch, weatherproof and fast-drying. Hamac Tex® is also known for its resistance to weathering as well as for its colour fastness.

Integrated safety swivel

Another great detail developed and patented by LA SIESTA is the integrated safety swivel for increased safety and comfort. It enables rotation around your own axis without overwinding the suspension ropes.

Tearproof selvage

The two borders of the lying surface feature a particularly tight weave. Thanks to this robust surface, exceptional stability is guaranteed.

High number of suspension cords

Additional comfort thanks to a multitude of suspension cords that distribute the weight equally to the cloth of the hammock and hence give a unique feeling of agravity.

Responsible forestry

The FSC® logo guarantees that the wood used in a product has been produced in compliance with the strict rules of the Forest Stewardship Council from sowing the tree via several processing steps up to the final product. FSC®-Licence Code: C012427
