

Stand for Baby hammock

**Yayita** YAS02-1

Caramelised bamboo from well-managed forests (FSC®), manufactured in

high quality plate technology.

Stand for Baby hammock **Yayita** YAS02-1

### Bamboo spreader bar

The spreader bar is made of cultivated bamboo. Thanks to its production in high quality plate technology, it has an exceptionally robust structure and a comfortably smooth surface. Bamboo is weatherproof and can be left outside all summer without compromising its stability. Its dark colour – which is a visual highlight as well – is achieved by a special heating process called caramelisation.

### Adaptable lying position

The lying position can be adapted according to need thanks to a patented system. For infants who need protection similar to the in-womb experience, the closed position is better suited. When babies grow older, many of them often prefer a more open lying experience.

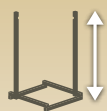

### Responsible forestry

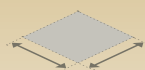

The FSC® logo guarantees that the wood used in a product has been produced in compliance with the strict rules of the Forest Stewardship Council from sowing the tree via several processing steps up to the final product. FSC®-Licence Code: C012427
